Why do cockroaches end up on their backs?

Cockroaches often die on their backs after being exposed to modern insecticides. Sprays and baited traps cause the cockroaches nervous system to go into spasms. This twitching caused the cockroach to flip over on its back. On a clean, slick surface there is nothing for them to grasp to help them upright themselves.

Postal Card. July 29, 1913 with
1¢ post card rate. Jefferson
definitive Die 1 – end of queue
small, sloping sharply downward.

Used Orientation postcard. Glossy finish by Ivelin.
Divided back, from Pearl, Miss. to Brandon,
Miss, April 9, 2014 at current 34¢ postcard rate.
