**NOTE:** Placements of moths in Pyralidae and Crambidae are in flux, as are assignments to their respective subfamilies. As with all names, I arbitrarily standardize with the use of names shown in the following web site: [www.nic.funet.fi/pub/sci/bio/life/insecta/html](http://www.nic.funet.fi/pub/sci/bio/life/insecta/html). [Ed. note: This site includes a caveat that it is not an official reference for taxonomic naming or ranking. However, I have found that the creator has assembled the most thorough and current listings for Lepidoptera from the widest available sources and I refer to it often.]

**Non-Official and Stamperija Issues:** The following “Russian” issues are not official, but I list them for those interested. With such a large number of novel insects on these labels/cinderellas, it is certainly tempting to add them to our collections.

[Ed. note: Stamperija Ltd., a firm in Lithuania, produced the other issues for several African governments. Although reported to be available in the post offices of the country named, they are not listed by Scott. The Michel catalog lists some of them.]
